

Table 10. Case Fatality Rate of Casualties Who Required 15 or More Pints of Blood and Plasma Expander (January 1952 to August 1953)

Type of Injury	Total			Number Dying of Continued Hemorrhage	Case Fatality Rate Excluding Continued Hemorrhage*
	No.	Deaths	Case Fatality Rates		
Abdominal	24	19	79%	11	61.5%
Abdominal and extremities.	29	12	41%	3	35.0%
Extremities	29	5	17%	1	14.0%
Chest	7	3	43%	1	33.0%
Total Average	89	39	44%	16	31.5%

*Case fatality rate computed after the number dying from continued hemorrhage had been excluded from the original total number of deaths.
