

FIG. 3.—Alveolus in the early stage of rod hepatization, showing capillary engorgement, nearly complete desquamation of the epithelium, and an alveolar exudate in which fibrin is abundant. Swollen epithelial cells are seen along the alveolar wall and free in the serum-filled space between the fibrinous mass and the alveolar wall. Accession number 22728, Army Medical Museum. Negative number 41217. Hematoxylin and eosin stain;  $\times 600$
