

FIG. 139.—Interlobular lymphangitis in a lobular pneumonia due to hemolytic streptococci. The lymphatics and interstitial tissue are filled with inflammatory edema and leucocytes. Lobules are irregularly consolidated, with an exudate composed of serum, leucocytes and a small amount of fibrin. Accession number 3106, Army Medical Museum. Negative number 45215. Hematoxylin and eosin stain; $\times 21$.
