

FIG. 182.—Mid section of the knee in Fig. 181, showing an extreme of gas formation in the type of gangrene, usually due to pure infections by the Welch bacillus. In the posterior margin of the calf and beneath the skin, apparently in close relation to the wound tract where a superficial hemorrhage has occurred, is a putrefactive gangrenous process. Accession number 2920, Army Medical Museum. Negative number 30852
