

FIG. 190.—Vertical section of the limb in Fig. 189, showing putrefactive gangrene in all the muscles of the thigh just below the level of the base of the débrided wound. The section through the popliteal artery shows that it is empty of any clot. There is little or no gaseous involvement of the muscles at this level. Accession number 2919, Army Medical Museum. Negative number 32346
