

FIG. 200.—Section from the gangrenous area close to the wound tract. It shows gas bubbles, a laking of some muscle fibers, and in others an accentuation of their cross striations. The numerous rod-shaped organisms of different sizes, both Gram-negative and Gram-positive, indicate the mixed infection with putrefactive bacteria which was present in this case. Accession number 2914, Army Medical Museum. Negative number 46223. MacCallum stain; $\times 840$
