

FIG. 203.—Section taken from an area of comparatively pure emphysematous gangrene. It shows bubbles in muscle fibers and Gram-positive bacilli in comparative purity, most of which are probably Welch bacilli. There is an occasional sporulating form. One of these is found within a large bubble at the end of the muscle fiber. Accession number 2914, Army Medical Museum. Negative number 46153. MacCallum stain; $\times 745$
