

FIG. 216.—Ridge in thigh where cotton tourniquet had been placed just below the point of amputation. The inner aspect of the lower leg shows the formation of an exudate in the wound, some bronzing of the skin around the wound in the bend of the knee, and beginning gangrenous blisters in an area approximately 3 by 6 cm. above the wound of compounding. Accession number 4707, Army Medical Museum, Negative number 30229
