

FIG. 223.—An area where muscles are cut almost longitudinally, with a moderate amount of leucocytic exudate. There is a small accumulation of gas within one ruptured fiber in the lower left part of the picture. One fiber at the top shows a single bubble of gas. In the upper left-hand portion is a small foreign body. Some fibers are ruptured, probably due to the trauma, since the gas accumulation is not marked. Accession number 4707, Army Medical Museum. Negative number 45728. MacCallum stain;  $\times 195$
