

FIG. 244.—The surface shown is cut several centimeters posterior to the preceding section. It shows a portion of the wound tract with a surrounding putrefactive gangrene. The remaining muscles show the toxic type of gangrene, excepting the gastrocnemius, occupying the middle of the lower portion of the picture, which alone shows a well advanced emphysematous type of gangrene, with wide separation of muscle bundles by large bubbles of gas. Accession number 2892, Army Medical Museum. Negative number 32106
