

FIG. 26.—Bronchiole in the center of a peribronchiolar consolidation, showing a seropurulent exudate, some proliferation of the basal cell layer, with but little desquamation of the columnar cells. Basement membrane is thickened and the surrounding tissue edematous and infiltrated with leucocytes. "Hyalin thrombi" are seen in small vessels in the surrounding tissue. Accession number 2696, Army Medical Museum. Negative number 45999. Hematoxylin and eosin stain; $\times 235$
