

FIG. 27.—Longitudinal section of a bronchiole containing purulent exudate in which is one large space formerly the location of a bubble of air. No organism isolated; organisms of streptococci type in purulent exudate in the bronchi, Gram-negative bacteria in the ductuli. Surrounding lung tissue shows beginning consolidation, exudate being most dense near the bronchiolus from which it appears to have spread. Accession number 1049, Army Medical Museum. Negative number 45181. Hematoxylin and eosin stain;  $\times 33$
