

FIG. 281.—Muscle fibers in the putrefactive area of gangrene. The fibers are segmented and partially liquefied. There are two types of Gram-positive rods shown which appear to be Welch bacilli and one of the putrefactive group. The latter show terminal spores. Small amounts of gas were present. Accession number 4711, Army Medical Museum. Negative number 46151. MacCallum stain; $\times 810$.
