

FIG. 284.—Mid section of the lower third of the thigh and upper two-thirds of the leg. There is massive damage to the muscles in the popliteal area and to the posterior thigh and calf muscles. The popliteal and thigh muscles appear to be affected by a putrefactive gangrene. There are small accumulations of gas in the calf muscles. Accession number 2918, Army Medical Museum. Negative number 32232
