

FIG. 29.—Respiratory bronchiole, showing purulent exudate which is continuous with that of the adjacent alveolar consolidation. A small group of alveoli open into the bronchiole on the right, where the wall is interrupted and the columnar cells merge with the flattened epithelium. So-called "hyaline thrombus" in vein near bronchiole. The lymph spaces around the vein are edematous. Accession number 2696, Army Medical Museum. Negative number 46010. Hematoxylin and eosin stain; X 265
