

FIG. 45.—A small nodular consolidated area of peribronchiolar pneumonia. Section is taken through the division of a ductus respiratorius into atria. Atrial lumen filled with purulent exudate, as are the surrounding alveoli. The walls of alveoli adjacent to the tissue about the atria are swollen from inflammatory edema and are infiltrated with leucocytes. Accession number 2694, Army Medical Museum. Negative number 46032. Hematoxylin and eosin stain; $\times 170$
