

FIG. 70.—Late stage of interstitial reaction about bronchioles, showing the healing process well advanced, with overproduction of connective tissue, which, outside the immediate vicinity of the bronchi, is infiltrated with mononuclear leucocytes. The vascular submucosa is replaced with relatively avascular fibrous tissue. Accession number 3038B Army Medical Museum. Negative number 45202. Hematoxylin and eosin stain; $\times 210$.
