

FIGURE 113.—Rabbit. Skin of belly shows results of four applications of standard drops of mustard gas. Above two areas of typical edema, the one on the rabbit's right untreated, the one to the left washed off in five minutes by water. The latter is more diffuse, larger in area, but less intense. Below, on the rabbit's right, an area washed after five minutes with soap containing an excess of free alkali. This area shows the least reaction. On the lower left is an area treated, after five minutes, with potassium permanganate. The reaction here is most marked.
