

FIG. 226.—Comparison of oils. Observe the degree of effect. Each area received 0.01 c. c. of 3 per cent solution of dichlorethylsulphide in the oil, spread over a surface of about one-half inch diameter. The photograph was taken 2 days after application. The solvent oils were as follows: 110, liquid petrolatum; 111, raw linseed oil; 112, boiled linseed oil; 113, olive oil; 114, castor oil; 115, cod-liver oil. (The figures refer to experiments.)
