

TABLE 50.—RESULTS OF URINE CONCENTRATION TESTS EMPLOYING PITUITRIN—32 CASES

Specific Gravity of Urine <sup>1</sup>	Time from Wounding to First Test <i>Days</i>	Other Related Factors						Total Patients	
		<i>Number of Patients</i>				Hypotension on Admission	Oliguria or Anuria		High Azotemia Developed
		Degree of Initial Shock							
		None	Slight	Moderate	Severe				
1.025 or Higher. . .	2 to 7	3	6	5	3	8	6	2	17
1.018 to 1.025 . . .	2 to 8	0	1	8	0	5	5	1	9
Under 1.018 . . . .	1 to 17	1	1	1	3	4	<sup>2</sup> 5	5	6
Total . . . .		4	8	14	6	17	16	8	32

<sup>1</sup> Normal by the method used: 1 hourly specimen of 1.025 or higher.

<sup>2</sup> Actual output unknown in 2 cases, but good presumptive evidence of oliguria.
