

FIG. 112.—Air and serous exudate with formations of hyalin membrane in a group of atria and alveoli, the walls of which are infiltrated with leucocytes. Both pneumococci and streptococci were cultured from the lung; minute Gram-negative forms were found along atrial and bronchiolar walls of sections presenting this type of reaction, in addition to streptococci. Accession number 3117, Army Medical Museum. Negative number 45280. Hematoxylin and eosin stain; $\times 130$
