Source—Continued

Department Dietitians, March-May 1943; and enlisted men except for February-April 1942, January 1943, and August-December 1943. All other figures are diverse from those shown in "Strength of the Army" and were computed by use of the following sources:

For all male officer corps except the Pharmacy Corps Orders issued by The Adjutant General for accessions and separations.

Pharmacy Corps. Report on Active Duty Personnel, Last Week of the Month, Office of The Surgeon General.

Army Nurse Corps. "Procurement and Separations Account," Nursing Branch, Personnel Service, Office of The Surgeon General.

Medical Department Dietitians. Dietetics Branch, Personnel Service, Office of The Surgeon General.

Physical Therapists. Physical Therapist Branch, Personnel Service, Office of The Surgeon General.

It is probable that all the sources other than those pertaining to the Pharmacy Corps were based, despite the absence of a specific statement to that effect, on entrances into and departures from the service and were, specifically, orders issued by The Adjutant General for such actions. It is also probable that the strength figures obtained on this basis were prepared by the Resources Analysis Division a short time before they were dispatched for use by the Army Service Forces; but it is not impossible, in view of the dissatisfaction of the Office of The Surgeon General with strength data submitted by The Adjutant General, that they were computed much earlier in some other unit than the Resources Analysis Division.

The time series as compiled for the Army Service Forces extended through July 1945 but reproduced The Adjutant General's figures for all dates shown within that year except in the case of the dietitians. By 1950, however, the figures for 1945, including those pertaining to the dietitians had been revised by the Resources Analysis Division, and data going through the entire year 1946 had been added. For the period January 1945 to June 1946, inclusive, The Adjutant General's strength figures therefore appear only in the following cases: Pharmacy Corps throughout; enlisted men throughout except for a slight variation, probably due to a clerical error, in March 1946; Army Nurse Corps, January to July 1945, inclusive, and Dietitians, August 1945; in the case of the last, the agreement between The Adjutant General's and The Surgeon General's figures may be merely coincidental. The revision was made with a view to establishing conformity between the data on separations compiled by the Resources Analysis Division (table 67) and the strength figures utilized by the Office of The Surgeon General. The figures on separations covered orders for such actions rather than the separations themselves. Orders for accessions also were used in the computing of strengths.

Since considerable time might elapse between the issuance of an order for an accession or separation and the compliance with the order, the use of these orders in determining strength tends, in the early period of the war, to show greater strengths than those reported by The Adjutant General, who compiled figures on the basis of counts of individuals present at the time of the report.
